Vehicle **with** camera prep use  
AC-068 connections found in bulk  
head lead through

Vehicle **without** camera prep  
Use AC-069-90 connection at  
Back of head unit

MAN

1. Ensure the AC-068, AC-069 or AC-069-90 adapters are only used with HARMAN HB A562 or A560 display head units.
2. **Purple** is camera 1, **Green** is camera 2.
3. At time of release monitor functions are as follows;
  - **Unit must be programmed by vehicle manufacturer for camera inputs to become active.**
  - Cameras should be set to "General camera" when using B1 and B2 inputs. This will allow for primary functionality over other media sources.
  - If camera is programmed as "reverse" it will be displayed when reverse gear is selected. All other infotainment functions will override the camera.
  - All other programming options require camera to be manually selected with the display "camera" button. All other infotainment functions will override the camera.
4. Please check with the vehicle manufacturer to confirm which monitor the vehicle is equipped with and if it has camera prep (Brigade cannot advise on this).
5. \*Pin B2 Can be programmed to trigger Cam2 with no trigger wire connected, or pin B2 can be set to active and receive a hard-wired input.

**IF THIS ADAPTER IS USED WITH THE WRONG DISPLAY UNIT  
IT MAY RESULT IN IRREVERSIBLE DAMAGE!**
